Battle Plan for Wikipedia Project

Goal: use Wikipedia link structure as a dataset to derive central place structures; show that the results for a place correlate with the results from qualitative analyses of the same place

Timeline: have enough data for a publication by the end of the semester

General Todos:

- ○ Start using Github issue tracker to keep track of progress and ideas

Next steps:

- ○ Come up with different formulas to identify central places in our dataset

- ○ Implement them as SQL queries

- ○ Find (recent) papers that look at Central place structures from a qualitative perspective. Should ideally look at places in English-speaking countries

- ○ Compare results from those papers; qualitative analysis for the time being, quantitative will be hard
